This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Fig. 4a - Species 1; Figs. 5a-6 - Species 2; Figs. 7-10 - Species 3.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

It is not clear, so that applicant must make the choice as noted above.

The following claim(s) are generic: Claim 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: There appears to be no special corresponding special

technical feature because the only feature linking the claims, found in claim 1 is that "the heating conductor path comprises different partial heating resistances between the supply line part and the sensor tip, and the magnitude is...dependent on the spacing distance of the partial heating resistance of the heating resistance ...of the path to the sensor tip". This element is disclosed at the admitted prior art Fig. 2a where the length of the long straight part is a partial heating resistance that is different than the shorter paths. Moreover, the claim is so broad as to read on admitted prior art Fig. 1c since the length of any portion of the path can be defined to be a different portion having a different length.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
